Total transparency for every cast ballot, every vote.

As the focus on transparency increases with every election, Dominion listened to the real-world customer needs and developed the most comprehensive ballot audit tool in the industry.

Ballot Audit Review provides full visibility of the tabulation process by documenting and displaying each ballot from scan to tally. Intuitive tools, and customizable views allow the user to inspect the specific ballots they want, how they want.

Ballot Audit Review delivers transparency through auditability for every cast ballot. Ballot Audit Review provides a side by side comparison of the full ballot image, AuditMark vote summary, any adjudication decisions, and the Cast Vote Record. Sortable by district, precinct, contest, and adjudicated ballots, users have the power to audit any election to assure the accuracy of the certified results.

Sort by district, precinct, contest, and adjudicated ballots.

The Auditmark shows the system interpretation of the corresponding ballot image. The Cost Vote Record details how the vote was tabulated.

Users can view all marks on the original ballot images.

Ballots searchable by ballot ID

Dominion’s Ballot Audit Review module delivers transparency through auditability for every cast ballot. Ballot Audit Review provides a side by side comparison of the full ballot image, AuditMark vote summary, any adjudication decisions, and the Cast Vote Record. Sortable by district, precinct, contest, and adjudicated ballots, users have the power to audit any election to assure the accuracy of the certified results.

Cost effective means to satisfy recounts and open records requests.

BALLOT AUDIT REVIEW MODULE

How It Works:

**Access** – Public access is granted using a secure registration process. Once registered, simply login, select the election and start viewing.

**Flexible** – Customizable views, zoom in and out, and filtering functionality lets the user see what they want how they want. A user defined experience.

**Transparent** – Viewers compare the original ballot image to the Cast Vote Record and Auditmark system summary. A complete audit trail.

**Adjudication** – Ballots requiring review for voter intent are clearly documented with the reason for the review and the resolution.

**Secure** – System designed to prevent service disruptions from DOS and DDOS attacks using a multi-layer approach.

**Security** Ballot images and Cast vote records are digitally signed to prevent tampering.

**Availability** 99.9% application and database availability.

**Redundancy** Layer 3 hardware, standby power supply, and backup network connectivity.
